KH	7.8 dKH
Salinity	35 ppt

Unwanted Heavy Metals

Element	Analysis
Al	0.0051 mg/l
As	0.00 mg/l
Cd	0.00 mg/l
Cu	0.00 mg/l
Hg	0.00 mg/l
La	0.00 mg/l

Pb	0.00 mg/l
Sb	0.00 mg/l
Sc	0.00 mg/l
Se	0.00 mg/l
Sn	0.00 mg/l
Ti	0.00 mg/l
W	0.00 mg/l

Li-Group

Element	Analysis
Li	0.1770 mg/l
Mo	0.00 mg/l
Ni	0.0004 mg/l

Fe-Group

Element	Analysis
Co	0.00 mg/l
Cr	0.00 mg/l
Fe	0.0220 mg/l

Nutrient Group

Element	Analysis
P	0.00 mg/l
PO4	0.00 mg/l

Macro Elements

Element	Analysis
B	4.74 mg/l
Br	74.0 mg/l
Ca	427 mg/l

K	396 mg/l
Mg	1370 mg/l
Na	10917 mg/l
S	730 mg/l
Sr	7.90 mg/l

I-Group

Element	Analysis
I	0.0614 mg/l
Mn	0.0225 mg/l
V	0.00 mg/l
Zn	0.0016 mg/l

Ba-Group

Element	Analysis
Ba	0.0172 mg/l
Be	0.00 mg/l

Si-Group

Element	Analysis
Si	0.0774 mg/l

RESULTS

Aquaforest products are manufactured in the EU under strict laboratory supervision to meet the highest quality standards. Each product is prepared from carefully selected raw components in quantities that are proven to yield consistent composition. During the manufacturing process, our entire salt range is tested in batches with ICP-OES technology. You can find test results that have been processed since May 2017 online.

How is our marine salt product range tested?

We mix our salt in batches of 600 kg (1323 lbs), and 3 separate samples per batch are collected during the production stage for testing. Each of these samples is dissolved in 15 litres (4US gal) of RO water. The ICP-OES analysis is performed by our experienced team of professionals to verify that the chemical composition is within a consistent range and to rule out the presence of unwanted contaminants. Note: Even though our salt is mixed thoroughly, not every bucket/box will be the same. TBetween containers, the parameters may vary slightly, and around a 2-3% variation is acceptable.Both the physical properties of the mix and the limitations of the processing techniques available contribute to this fluctuation. These variations are still smaller than the usual margin of error for popular hobbyist test kits.

Why do the tests show different values than those on the package?

How to prepare salt for testing?
